

GatorDock

Marine Access Solutions

Caladesi Island Floating Marina

Dunedin, Florida

PROJECT SUMMARY

Caladesi Island State Park, an intercoastal barrier island, chose GatorDock's Pontoon Floating Dock System and a seawall constructed with GatorAluminum sheet piling. The Pontoon float is constructed with a rugged aluminum exterior and features polyurathane foam - a perfect floatation option for mid-high traffic commercial marinas. Our long-life cycle product was the perfect choice to create a cost effective, salt water solution that has endured many strong storms throughout its many years. Additionally, the project was custom designed to include accessibility for ferries and their passengers.

Installation

1991

Project for

State of Florida
Dept. of Environmental Protection

Features

Pontoon Floating Dock System
100 slips
Aluminum Decking
Ferry Loading/Unloading Area
