

# GatorDock

Marine Access Solutions

## Cape Marina

Port Canaveral, Florida

### PROJECT SUMMARY

Cape Marina was one of the first large marinas built with GatorDock products. This almost four-decade old dock system is still in service; even the decking is original. Cape Marina experiences heavy traffic all through the year as it is a prime launch site for day trips and to watch space shuttle launches. In 2007 the marina choose to work with GatorDock again and expanded their system to include a fuel station. The Pontoon Float add-on was easy to plan for and install due to the accessible utility bays that run from dock section to dock section.

**Installation**  
1976  
38 years in service

**Project for**  
Cape Marina

**Features**  
115 slips  
19,000 sq. ft  
Combination Fixed and Floating
