

Fort De Soto Boat Ramp

Florida

PROJECT SUMMARY

Fort De Soto Park consists of over 1000 acres made up of five interconnected islands. The 22 lane boat ramp, built by Gator-Dock, is made up of 11 gangway and pontoon floating dock systems. The rugged aluminum pontoon docks, installed over two decades ago, feature 4-roller internal pile guides and wood fenders. Aluminum DRI gangways provide a smooth transition to the floating docks in low and high tide scenarios.

Installation
1990

Project for
Pinellas County

Features
Pontoon Floating Docks
Aluminum DRI Gangways
Slip-Resistant Aluminum Decking
