

## Nasa Space Gateway

Florida

### PROJECT SUMMARY

The DRII Gangway built for NASA features an E-Channel box frame with integrated non-slip aluminum decking. The two-line handrails with an attached toe rail are removable to allow loading and unloading of oversized items. The aluminum handrails of NASA's DRII are bolted to the side of the gangway frame. This aluminum loading ramp is one of several projects we have worked on with NASA.

**Installation**  
1998

**Project for**  
NASA Space Gateway

**Features**  
DuraRamp II Gangway  
Aluminum Decking  
Two-line handrail with toe rail
