

GatorDock

Marine Access Solutions

Wilmington Ferry Landing

Wilmington, Delaware

PROJECT SUMMARY

The public docks along the Christina River were pivotal to the all-access approach when redeveloping the Wilmington riverfront. This system sees high levels of traffic from rowers to river taxis to visiting tall ships. The alternating wood and aluminum features natural to GatorDock's construction transition seamlessly to the existing boardwalk. Additionally, a series of gangways with fixed/floating landings ensure full ADA accessibility regardless of water level.

Installation
1990

Project for
City of Wilmington

Features
Day Docking
3600 sq. ft
Aluminum Gangways
Floating Dock System
IPE Hardwood Decking
